most problems encountered in chemical engineering are sophisticated and interdisciplinary thus it is important for today's engineering students researchers and professionals to be proficient in the use of software tools for problem solving matlab is one such tool that is distinguished by the ability to perform calculations in vector matrix form a large library of built in functions strong structural language and a rich set of graphical visualization tools furthermore matlab integrates computations visualization and programming in an intuitive user friendly environment chemical engineering computation with matlab presents basic to advanced levels of problem solving techniques using matlab as the computation environment the book provides examples and problems extracted from core chemical engineering subject areas and presents a basic instruction in the use of matlab for problem solving it provides many examples and exercises and extensive problem solving instruction and solutions for various problems solutions are developed using fundamental principles to construct mathematical models and an equation oriented approach is used to generate numerical results a wealth of examples demonstrate the implementation of various problem solving approaches and methodologies for problem formulation problem solving analysis and presentation as well as visualization and documentation of results this book also provides aid with advanced problems that are often encountered in graduate research and industrial operations such as nonlinear regression parameter estimation in differential systems two point boundary value problems and partial differential equations and optimization

koretsky helps students understand and visualize thermodynamics through a qualitative discussion of the role of molecular interactions and a highly visual presentation of the material by showing how principles of thermodynamics relate to molecular concepts learned in prior courses engineering and chemical thermodynamics 2e helps students construct new knowledge on a solid conceptual foundation engineering and chemical thermodynamics 2e is designed for thermodynamics i and thermodynamics ii courses taught out of the chemical engineering department to chemical engineering majors specifically designed to accommodate students with different learning styles this text helps establish a solid foundation in engineering and chemical thermodynamics clear conceptual development worked out examples and numerous end of chapter problems promote deep learning of thermodynamics and teach students how to apply thermodynamics to real world engineering problems

the material included in this book was first presented in a series of lectures delivered at the university of minnesota in june 1983 in connection with the conference thermodynamics and phase transitions this conference was one of the principal events in the first year of operation of the institute for mathematics and its applications lma at the university of minnesota the institute was founded under the auspices of the national science foundation of the united states and the university of minnesota and is devoted to strengthening and fostering the relation of mathematics with its various applications to problems of the real world the present volume constitutes an important element in the continuing publication

program of the ipstitute previous publications in this program have appeared as lecture notes in the well known springer series and future ones will be part of a new series ima volumes in applied mathematics preface until recently it was believed that thermodynamics could be given a rigorous foundation only in certain restricted circumstances particularly those involving reversible and quasi static processes more general situations commonly arising in continuum theories have therefore been treated on the assumption that internal energy entropy and absolute temperature are a priori given quantities or have been dealt with on a more or less ad hoc basis with emphasis for example on various types of variational formulations and maximization rules
